

## Dedication

## Acknowledgments

Reflective of the significant partnerships required to implement Fetal and Infant Mortality Review (FIMR) Programs, the Johns Hopkins University Women's and Children's Health Policy Center evaluation of FIMR programs nationwide was an undertaking possible only with the assistance of a diverse array of individuals and organizations. These colleagues from the public health agencies and their institutions represent the public and private sector health professions, working at the community, state, and national levels. Their contributions, noted later, were substantial; for their commitment to improving the health and well-being of women, children, and families we are most grateful.

First, we thank nearly 600 individuals who were generous in their time and expertise to provide information in study interviews and surveys. We also are grateful to the members of the Technical Assistance Group (TAG), convened to provide guidance on study design and instrument development. We thank Katherine Baldwin (Project Manager) and all of the individuals who staffed the study, and Bernard Guyer and Patricia O'Campo for providing thoughtful feedback and insightful guidance whenever asked. We also thank the Association of Maternal and Child Health Programs and CityMatCH, who assisted by endorsing this national evaluation and lending their support in recruiting survey respondents. The work of Diane Burkom, Katrina Ott, and the team of interviewers at Battelle Center for Public Health Research and Evaluation was critical and is greatly appreciated. We additionally thank the key staff at the Maternal and Child Health Bureau, Health Resources and Services Administration—Ellen Hutchins, Ann Koontz, and Brenda Lisi, and at the American College of Obstetricians and Gynecologists—Jan Chapin and Kathy Buckley, who provided advice and assistance throughout. As always, we appreciate the comments and suggestions provided by our anonymous reviewers, as well as Lauren Zerbe's patience and skill in preparation of the manuscripts. Finally, we are greatly indebted to our colleague, Arden Handler, for her tough questions, keen insights, skilled pen, and commitment to excellence in her role as editor of this special issue of the MCH Journal. The JHU national FIMR eval-

uation was supported by grants U93MC00101 and U08MC00136 from the Maternal and Child Health Bureau, Health Resources and Services Administration, Department of Health and Human Services.
