The Department of Biostatistics at Johns Hopkins Bloomberg School of Public Health is looking for a research scientist specializing in software engineering. The candidate should have at least a master’s degree in computer science or equivalent. The successful candidate will work with faculty in the Department to design and implement databases, implement professional software to help translate research conducted in the Department, participate in research meetings, contribute software development knowledge in all components of the research process, and assist with website design and development, cloud computing and graphical user interface development. The position will require collaboration with multiple researchers in the Department and funding will be provided via a combination of funded grants and strategic Department investments. The successful candidate will be required to achieve and maintain long-term funding via internal and external collaborations. The specific position appointment will be commensurate with the level of experience of the successful candidate. The Department of Biostatistics at Johns Hopkins Bloomberg School of Public Health is an equal opportunity employer (EOE). The candidate should email a CV and cover letter to se_biostat@jhu.edu.
