#### Departmental Organization

The Department of International Health is one of ten departments in the Bloomberg School of Public Health. The departments of the School reflect both disciplinary and topical orientation. International Health is a topically based department and its faculty reflects a variety of disciplines including anthropology, biostatistics, clinical medicine, communications, demography, economics, epidemiology, immunology, infectious disease, management, and nutrition. The Department is organized around the academic programs with an Associate Chair heading each program area. In addition, the Associate Chair for Academic Programs coordinates all the academic programs and chairs the admissions and curriculum and credentials committees. Faculty have a primary home in one program area, but many faculty cross-advice students in other program areas as well.
Several administrative staff and faculty members within the Department help oversee and facilitate the academic programs. These individuals are available to help you navigate the program and the department. The following information is being provided to help you understand the roles of each of these individuals.

**Joanne Katz (Associate Chair for Academic Programs):** Dr. Katz is responsible for the management and oversight of all academic programs. In this role, she is also chair of the Curriculum & Credentials Committee, which sets and implements policies and procedures for department academic programs and monitors student progress.

**Cristina Salazar (Academic Program Manager):** Cristina oversees the operations of the academic programs in the department and works as the liaison between students, faculty, and administrative offices of both the department and the School. She is also responsible for managing the departmental admissions process, student recruitment activities, coordination of orientation and visitor programs, departmental course support (TAs and administrative budgets), academic publications and web materials, course waivers, and staffing the departmental academic committees.

**Carol Buckley (Academic Program Coordinator):** Carol assists students with all academic issues related to registration, tracking of academic progress and meeting departmental requirements, departmental courses, departmental exams (such as comprehensive exams and thesis defenses), internship checklists, and graduation.
Faculty PhD Program Coordinators – within the Department, the various degree programs are broken down into specific areas of interest, known as program areas. International Health has four program areas. Each program area program has a faculty member who is the overall coordinator of that program area’s PhD degree program. They are responsible for the management and oversight of the individual PhD programs. Students can approach program coordinators for questions about the program area and degree information (including curriculum requirements, course selection, etc.). They act as a secondary/general advisor for students within their program areas, and can be sought out to answer questions in the advisor’s absence or as an additional source of information.

Financial Managers and Payroll Coordinators – the Department has a central payroll office that is staffed by Tanya Falls and Allison Quarles. They handle the General Funds budget as well as any central departmental payroll/awards for students. In addition, each program area has its own financial manager who is responsible for the oversight of his/her area’s budget and payroll activities. Students who plan to work within the department should see one of these individuals to fill out the appropriate paperwork and verify their eligibility for employment prior to their start date. If you are at all uncertain as to who you should see about these issues, contact either Tanya Falls or Cristina Salazar for clarification.

Academic Committees

The Academic Program in the Department of International Health is governed by several committees designed to set policies and procedures relevant to the program(s) and ensure that these are fairly and clearly administered and enforced to protect the interests of students and the overall integrity of the program(s). These committees and their members are as follows:

**CURRICULUM AND CREDENTIALS COMMITTEE**
Joanne Katz, Chair
Cristina Salazar, Staff

DEPARTMENT OF INTERNATIONAL HEALTH
PhD REQUIREMENTS

General Requirements

Department of International Health (DIH) candidates for the degree Doctor of Philosophy (Ph.D.) must fulfill all School requirements, as specified in the catalog. These include, but are not limited to, a minimum of four consecutive academic terms at the School in full-time residence, satisfactory completion of a Departmental Written Comprehensive Examination, satisfactory performance on Departmental and University Preliminary Oral Examinations testing readiness to undertake research, and preparation and successful defense of a thesis based upon independent research. In addition, all doctoral students must complete a non-thesis related research experience in addition to the doctoral thesis.

Additional DIH requirements are specified herein and include an additional 2 academic terms in full-time residence (total of 6 academic terms), and require that full-time registration be a minimum of 16 credits per term. Students having already earned credit within the past three years for any of the listed courses may use them toward satisfaction of doctoral course requirements.

Each student is admitted into one of four programs. If, after beginning the program, a student wants to transfer from one program to another, the student must request that his file be sent to the program coordinator and he/she must be formally accepted into the new program.

Completion of Requirements

PhD students are expected to complete all requirements for the degree within seven years of matriculation. Formal leaves of absence may extend this time beyond seven years. While a seven-year maximum limit has been placed upon the period of doctoral study, DIH students are normally expected to complete all requirements within a period of 4-5 years, depending upon the particular program they are following.

Introduction to Online Learning

The School of Public Health offers courses in various formats, including a number of online classes. Students may at some point want or need to register for a course online. In order to be eligible to take an online course, students must complete the Introduction to Online Learning, which is offered through the Distance Education Division of the Johns Hopkins Bloomberg School of Public Health. This non-credit mini course is a pre-requisite for all courses offered by this division and must be completed prior to the start of the term in which a student wishes to enroll in an online course. Since the School does not permit conditional and/or concurrent enrollment (that is, you must take the online course prior to enrolling in a distance education class), the school requires all incoming students to take this non-credit course during or before the first term they enroll. For course dates and enrollment information, please visit the Distance Education Division website: http://distance.jhsph.edu/oll/

General Doctoral Requirements

Ethics (2 courses) - All doctoral students must take two general ethics courses. The first, 550.860.82 Academic and Research Ethics, is an online course for 0 credits that every student is required to take in their first term of matriculation. Failure to complete this course will prevent students from matriculating for 3rd term. PhD students are also required to take one of these two courses. The second course is an option between 550.600 Responsible Conduct of Research offered first term, OR 306.665 Research Ethics and Integrity: US and International Issues offered third term.
Doctoral Seminar in International Health – All doctoral students are required to take the multi-term course 220.605 and 220.606 Doctoral Seminar in International Health I & II, offered in first and second terms. This course explores the following topics relevant to International Health: Health and International Development, Transitions (demographic, epidemiologic, nutritional and migration), Sanitation programs, Disease Eradication Programs, past present and future, Chronic Disease, a new challenge for programs, and Primary Health Care, history, evidence and future. These courses are not a requirement for PhD Human Nutrition students, but are recommended.

Public Health Perspectives on Research – All PhD students are required to take 550.865 Public Health Perspectives on Research offered online in 2nd term. This requirement must be completed before scheduling the School Preliminary Oral Exam. Students may request a waiver from this course if they have completed an MPH, professional MHS, or MSPH degree at a domestic institution within the last ten years. Requests for waivers should be addressed to Maryann Smith (mksmith@jhsph.edu).

Standards of Academic Performance

Letter grades must be earned in all courses used to satisfy requirements. Please note that courses may be counted only once in fulfilling requirements. Students must receive satisfactory grades of C or higher in all required courses and continuously maintain a cumulative Grade Point Average (G.P.A.) of at least 3.0 in order to remain a degree candidate in good standing. Any student who receives a “D” or “F” in a required course must repeat the course and achieve at least a “C”. Anyone not meeting these standards will be placed on probationary status pending action by the Department Committee on Curriculum and Credentials. The Committee will either recommend immediate termination from the degree program or will establish the minimum conditions to be fulfilled in order to return to the "good standing" status and avoid termination. In case conditions are imposed, the Committee will specify the maximum time allowed for satisfaction of the conditions.

Doctoral students supported by departmentally administered funds (tuition scholarships and/or stipend support) must maintain a grade point average of 3.0 or above. Students who drop below a GPA of 3.0 and are placed on academic probation will have their scholarship eligibility reviewed by the Department’s Committee on Curriculum and Credentials. Consistent academic probation status (defined as two or more terms) will result in a reconsideration of tuition and stipend support.

Total Units

The total number of course units to be earned depends upon individual program requirements, but must be at least 84. Where general and program-specific requirements total less than 84, the difference may be made up in electives. Special Studies Thesis Research (820 series) may not be included in the count, but tutorials and other studies earning credit in the 840 series are admissible.

The School requires that at least 18 credit units must be satisfactorily completed in formal courses outside of the Department of International Health. Among those 18 credit units, no less than three courses must be satisfactorily completed in one or more departments of the School of Public Health. The remaining outside units may be earned in any department or division of the University. Candidates who have completed a master's program at this School may apply 12 units from that program toward these 18 units.

Registration, Enrollment and Tuition

PhD students are expected to complete all requirements for the degree within seven years of matriculation. Formal leaves of absence may extend this time beyond seven years. All students must be continuously registered full-time until all requirements for the degree program have been satisfied. The Department of International Health defines full-time as a minimum of 16 credits per term. Failure to register for a term results in automatic withdrawal. A withdrawn student must be formally readmitted before resuming a
program of study. Upon readmission, a student must be registered for a minimum of two consecutive terms prior to completing degree requirements.

All new doctoral students will receive 100% of tuition discount for the first four terms of full time enrollment, provided they maintain full-time status and good academic status (see page 8). After the first four terms, students will receive a 50% tuition discount each term until the end of their fifth year of enrollment (20th term). Beyond five years there is no more tuition discount. Students who have not completed their degree by the fifth year will be responsible for 100% of their tuition. Leaves of absence are not counted in the five-year plan.

**Departmental Written Comprehensive Examination**

Satisfactory performance is required on a written comprehensive examination. The exam is offered twice annually near the end of the Second and Fourth Terms and is two days in length. The student should plan to take it when course work is essentially completed, since questions will cover both required courses and those representing the elected field of specialization and research. Because of the infrequent offering, however, the student may choose to take the exam somewhat before the final completion of coursework. While the exam may be taken whenever the student and advisor feel prepared, the timing does not affect the breadth and depth of coverage of course material. Although most of the material is covered in specific courses, it must be understood that graduate education involves much more than the accumulation of specific course units. Thus, students are responsible for the material, regardless of the particular curriculum followed. The dates for the 2014 summer doctoral examination will be announced by October 31st, 2013.

A minimum overall grade of 75% is required. Those scoring below this level must re-take the entire examination at its next semi-annual offering. Only one re-examination is permitted. Students failing twice are terminated from the doctoral program. MSPH students who pass the PhD examination must enter the PHD program within 3 years (4 years for Peace Corps/Masters International students), or retake and pass it again.

**Departmental Thesis Committee**

In order to undertake research leading to a thesis the student must prepare a research protocol acceptable to a Departmental Thesis Committee (DTC). The DTC is expected: to counsel the student in protocol preparation; to determine its acceptability as a basis for actually carrying out the research; and to provide guidance during the conduct of the research and the writing of the thesis. The three-member DTC, the five-member Preliminary Oral Committee (POC), and the four-member Committee of Final Readers (CFR) are three separate entities. Although it is desirable to provide for overlapping membership, the Thesis Advisor is the only individual who must be a member of all three committees.

The DTC should be formed as soon as the student has selected a tentative research topic. This will normally be by the time that coursework has been completed and the Departmental Written Comprehensive Examination has been taken. The Committee will have at least three members: the Thesis Advisor, a second representative (Advising or Participating Faculty) from the student's program, and a similarly qualified faculty member from another program or department. At least two of the members must be tenure-track faculty eligible to serve on School examining committees. The proposed members must be approved by the relevant Ph.D. Program Coordinator. Please use the Departmental Thesis Committee Form. It is expected that the student will meet at least twice per year (either in-person or electronically) with the DTC during the thesis phase of the program.

**Non-Thesis Related Research Experience**

All Ph.D. students must complete a research experience in addition to their doctoral thesis work. This is typically conducted with the student’s advisor or other faculty member prior to beginning doctoral thesis work. This can take a variety of forms including participating in the development and planning of a new research project, development of data collection instruments for a research project, conducting analysis of existing data,
or completing an entire, small research project on a topic other than the thesis topic. Please fill out the Non-Thesis Related Research Form in the forms section of the guide or from the Academic Program Administrator.

### Special Studies: Thesis Research

Students engaged in the planning or conduct of their thesis research will register for credit (pass/fail) in 22_.820, Special Studies Thesis Research. In order to receive credit for this work a report of progress must be submitted in a form suitable to the Advisor before the end of each academic quarter of such registration. In the absence of a report the Advisor is expected to assign a grade of "F" or "Incomplete." All grades of "Incomplete" automatically convert to "F" if not made up within two academic quarters.

### Departmental Oral Examination

The purposes of the departmental oral examination are: (1) to determine whether the student is adequately prepared to conduct the research outlined in a prepared proposal; (2) to offer constructive criticism on all aspects of a proposal; and (3) to determine whether the student has adequate command of knowledge in the subject area appropriate to his/her program to qualify for a doctoral degree.

Specific procedures for the examination are as follows.

- The student, in consultation with the Thesis Advisor, identifies at least three Departmental faculty (with “Scientist” or “Professor” in their official titles, and with primary appointments in our Department), in addition to the Advisor, who are able to participate in the oral examination. Two additional faculty members should be identified as alternates.

- Copies of a research proposal are to be circulated to all participating faculty at least 2 weeks in advance of the exam. The student should also arrange for a meeting room and multimedia equipment.

- Departmental Orals must be taken at least one month before the University Preliminary Oral Exam.

- The most senior faculty member other than the Advisor will act as Chair of the examining committee. The Chair is responsible for maintaining an atmosphere of constructive criticism, ensuring that each faculty member has adequate opportunity to question the student, and limiting the total duration of the exam to two hours or less.

- The oral exam will produce one of three results: (1) Unconditional Pass; proceed with the University Preliminary Oral as scheduled; (2) Conditional Pass; before proceeding as scheduled, the student should strengthen his/her competence in certain identified areas of weakness; or (3) Failure.

Only one re-examination is permitted. Anyone failing the departmental oral examination twice will be terminated from the doctoral program.

### University Preliminary Oral Examination

The University Preliminary Oral Examination must be taken no later than the end of the student’s third year in the Ph.D. program. Students must have taken the course 550.865.81Public Health Perspectives on Research before taking the University Oral Exam. After a period of leave of absence or withdrawal, a student must be registered for a minimum of two quarters before taking the University Preliminary Oral Examination. Ideally, the examination should be taken as soon as possible after: (1) passing the Departmental Written Comprehensive Examination; (2) passing the Departmental Oral Examination; and (3) establishing a specific research topic of interest.

Members of the examining committee represent the department of their primary appointment. The committee
of five members includes the student’s Thesis Advisor, one other DIH faculty member, and three members from at least two other departments in the University. Note that one of those three can be another DIH faculty member. The senior faculty member from outside the student’s major department will serve as the chair and must hold the rank of full or associate professor. One adjunct faculty or one scientist track faculty may serve on the committee, but may not serve as the chair or advisor. Two alternates should be identified. Students should be aware that an alternate who may need to serve in place of the committee chair must be of the rank of associate or full professor.

The examination’s purpose is to determine whether the student is sufficiently knowledgeable of the general field of public health and is capable of undertaking independent research in a specialized area of interest. The question period of about two hours considers the student’s course work as well as the feasibility and logical consistency of any research proposal. The examination is not meant to be a proposal defense; rather the research proposal permits the student to be questioned on areas of expertise and public health problems with which s/he is familiar.

Three results of the examination are possible: (1) unconditional pass; (2) conditional pass; and (3) failure with the possibility for one reexamination. When the second or third outcomes occur, the examining committee is expected to set time limits for the satisfaction of conditions or the re-examination. In case the examining committee fails to set time limits, they will be established by the Departmental Committee on Curriculum and Credentials. In no case may the time allowed exceed one year. Only one re-examination is permitted. Students failing the University Preliminary Oral Examination twice will be terminated from the doctoral program.

For both the Departmental and University oral examinations, the student may need to begin polling faculty for dates/times that will be available a couple months in advance, as many faculty members have fixed teaching and travel commitments. Paperwork for the school wide oral must be submitted one month prior to the date of the exam. To complete the paperwork, students should meet with Carol Buckley.

### Advising and Exam Committee Composition by Faculty Rank

<table>
<thead>
<tr>
<th></th>
<th>Professor Track</th>
<th>Scientist Track</th>
<th>Adjunct</th>
<th>Other Part-Time Appointments</th>
</tr>

<td>Yes***</td>
</tr>
<tr>
<td>Serving on Preliminary/Final Exams</td>
<td>Yes</td>
<td>Yes**</td>
<td>Yes**</td>
<td>No</td>
</tr>
</tbody>
</table>

* Adjunct faculty may continue as a student’s advisor if the initial assignment as advisor occurred during his/her full-time faculty appointment. Adjunct faculty may not serve as newly appointed advisor
** Either one Scientist track or one Adjunct may serve on an exam committee, but not both
*** Serving as co-advisor is permissible with Professor Track faculty as other co-advisor.

### Other Notes:
An advisor must have an active primary or joint appointment in the student’s department.
Emeriti Professors may serve as doctoral advisors or as Chair of the exam committee
Although visiting faculty have full-time appointments, they may not serve as doctoral advisors.
Sr. Research associates and research associates, Instructors, and non-faculty practitioners cannot be doctoral advisors, co-advisors or serve on exams.

### Approval of Thesis Proposal
Regardless of the mode and timing of general presentation of the proposal, the DTC members will provide continuing guidance in its development. When they are satisfied that the proposal is of acceptable quality to
be implemented they will indicate their approval on a form prepared for this purpose. After giving approval, the DTC is expected to continue offering suggestions for further improvement, especially in light of unexpected difficulties encountered in the field. The Department expects students will meet with the DTC at least once per year during the course of thesis research. Student must get the Departmental Thesis committee to sign the Thesis Proposal Approval Form (see forms section) and return to Carol Buckley in room E8516.

Realistically, it is not always possible for the student to carry out in the field the specific study designed in Baltimore. In such cases the study finally approved for implementation may be different from the one presented, and possibly approved, in Baltimore. Although the oral presentation is to cover the study the student intends to carry out, it must necessarily be considered presentation of a study, rather than presentation of the study that must be completed. In the event that the study design changes after the oral presentation, the final design must receive the written approval of the DTC, even if the earlier proposal had already received written approval.

**Desired Sequence**

The typical sequence for the foregoing events to take place is as follows:

- Complete coursework and identify research topic;
- Pass Departmental Written Comprehensive Examination;
- Conduct non-thesis related research experience;
- Form Departmental Thesis Committee;
- Pass Departmental Oral Examination;
- Pass University Preliminary Oral Examination;
- Gain written approval of thesis research protocol;
- Gain approval of thesis protocol from the Institutional Review Board (http://phirst.jhsph.edu), or the Committee on Animal Care and Use (http://web.jhu.edu/animalcare/).
- Carry out thesis research.

Flexibility is allowed in following this sequence. Specifically, students are encouraged to gain approval of the research protocol earlier than indicated if attention to the protocol does not impair preparation for Departmental Written and University Preliminary Oral Examinations. Delays in gaining approval of the research proposal will not jeopardize receipt of departmental tuition scholarship after 6 terms of full-time residence.

**Criteria and Preparation for Doctoral Thesis Research**

The final authority for requirements for the degree Doctor of Philosophy is held by the Graduate Board of Johns Hopkins University. The following description of the doctoral thesis is taken from Guidelines for the Preparation of Dissertations and Theses, Johns Hopkins University, October 2007 (go to the Sheridan Libraries Website or [http://www.library.jhu.edu/services/cbo/guidelines.html](http://www.library.jhu.edu/services/cbo/guidelines.html)):

The dissertation/thesis is the culmination of the graduate degree. It represents an original critical or synthetic treatment of a subject in the student’s field. It documents research formulated independently and presents its findings in a manner consistent with publications in scholarly journals or with scholarly books. The dissertation serves as a reference through the UMI (formerly University Microfilm, Inc.) *Dissertation Abstracts International* and through publication in whole or in part. Manuscripts not conforming to the following standards will not be accepted as partial fulfillment towards the graduate degree.

The Council of Graduate Schools offers the following definition: The doctoral dissertation should (1) Reveal the student’s ability to analyze, interpret, and synthesize information; (2) Demonstrate the student’s knowledge of the literature relating to the project or at least acknowledge prior scholarship on which the dissertation is built; (3) Describe the methods and procedures used; (4) Present results in a sequential and logical manner;
(5) Display the student’s ability to discuss fully and coherently the meaning of the results. In the sciences, the work must be described in sufficient detail to permit an independent investigator to replicate the results.

The dissertation [thesis] is the beginning of one’s scholarly work, not its culmination. Dissertation research should provide students with hands-on, directed experience in the primary research methods of the discipline, and should prepare students for the type of research/scholarship that will be expected of them after they receive the Ph.D. degree.

The question of originality - In its most general sense, “original” describes research that has not been done previously or that creates new knowledge. Although a dissertation should not duplicate another researcher’s work, the topic, project, or approach taken need not be solely that of the graduate student. An adviser or other faculty member should encourage a student to explore a particular topic or project with the idea that the student himself or herself will independently develop the “thesis” of the dissertation. The student should be able to demonstrate what portion of the research or scholarship represents his or her own thinking.

The question of collaboration - In those disciplines where doctoral research efforts are typically part of a larger collaborative project, it is crucial that an individual student’s contribution be precisely delineated. Whether the collaboration is between faculty or student or among students, Ph.D. candidates are expected to be able to demonstrate the uniqueness of their own contributions and to define what part of the larger work represents their own ideas and individual efforts. (The Role and Nature of the Doctoral Dissertation, Council of Graduate Schools. CGS, Washington, D.C. 1991). The student assumes the responsibility for conducting the research and the writing of the dissertation in a manner that reflects the academic integrity of the University.

The Policy and Procedures Manual of the Bloomberg School of Public Health is briefer in its description of a doctoral thesis: “The thesis must be (1) based on original research, (2) worthy of publication, and (3) acceptable to the sponsoring department and to a committee of thesis readers.”

Requirements for the doctoral thesis research in the Department of International Health include meeting the following educational objectives:

• Identifying and articulating an important scientific or public health problem in a manner conducive to research. In the thesis proposal this would be expressed by documenting at least one substantive question that is both researchable and important to the field of international health. The research question(s) must be expressed as specific research objectives and/or hypotheses that define the variables and relationships of interest.

• Summarizing and critically appraising relevant existing knowledge on the subject under study. In the thesis this would be expressed by a focused and critical review of the relevant literature pertinent to the research question(s) being addressed. In many theses, this will also involve the description of the theoretical model or conceptual framework upon which the research question(s) will be based.

• Using scientifically sound and appropriate methods to design and implement a research study to adequately address the question(s) of interest. In the thesis this would involve the detailed specification of the study methods, including all data collection and data management efforts needed to implement the study design, a description of the analytic approaches to be used, and the application of any inferential models that will be used to describe the results of the data analysis. All research involving human subjects must be approved by the School’s Committee on Human Research and all research involving animals must be approved by the University’s Committee on Animal Care and Use. It is expected that the doctoral student will develop the application for approval from these committees under the supervision of his/her thesis advisor.

• Interpreting the research findings in the context of previous knowledge in the specific topical area of the thesis. As a part of the thesis, conclusions and recommendations for further research or programmatic initiatives based on the evidence generated by the thesis research must be critically explored, presented and shown to make important contributions to the state of knowledge in the field.

As the academic programs in the Department of International Health span a spectrum of disciplinary boundaries, the specific requirements for the form of the doctoral thesis work will vary by program. However, all students are expected to meet the above-mentioned minimal educational objectives in addition to any
further objectives stated in the program-specific sections of this handbook. The specific activities of the doctoral thesis research must meet the experiential requirements of the primary research methods typically employed by the discipline. For example, most doctoral theses in all four program areas in the department will be based on primary data collection, as this is the primary research method in most behavioral science, epidemiologic, nutrition, and health services research studies. This will often involve extensive time in the field implementing and/or overseeing the actual data collection and management process. Doctoral theses in the health economics specialization of the Health Systems Program may be based on original data or on secondary data analysis or theoretical development. It should be noted that the level and depth of analytic skill, scientific rigor and innovative approaches expected by the faculty for a doctoral thesis based solely on secondary data analysis will be considerable.

**Preparation of the Doctoral Thesis Document**

Students may fulfill their thesis requirement using either the traditional or “papers” option. Both options must comply with the organizational and formatting requirements of the Graduate Board (see Guidelines for the Preparation of Dissertations and Theses, The Graduate Board, Johns Hopkins University, October 1998 posted on the Graduate Board website). In each case the product must reflect high standards of scholarly endeavor. It is important to recognize that these options reflect only different formats for presentation and not fundamentally different processes.

The traditional thesis consists of a number of chapters typically including an introduction and specific research objectives, critical review of the literature and discussion of a theoretical or conceptual framework, study methods, results, interpretation, discussion and conclusions.

The “papers” option requires a minimum of three separate papers based on the thesis research in addition to complementary sections that make the thesis a whole. Each paper should stand on its own merits, and in addition, the papers together should embody a recognizable unifying theme. Although no required page length is specified, it is understood that taken together the papers should contain as much substantive information as is usually expected in a traditional thesis. As a result, the length of the papers may exceed the guidelines followed by journals. Appendices can be used to present additional analyses that allow for the review of the thesis by the final examination committees, but are not likely to be included in the paper when submitted for publication. Each of these “papers” is typically a separate chapter in the thesis document. A separate literature review is not always necessary; rather, literature citations should be made in each paper as appropriate and a comprehensive list of references must be included at the end of the document as per University regulations. However, the thesis must incorporate a critical review of available literature relevant to the research topic somewhere in the document. If the “papers” option is selected for the format of the thesis, this critical review can be either in a separate chapter or as a part of the discussion in each of the papers. In addition, when the thesis project consists of a portion of a larger research effort, an additional chapter discussing the overall methods and how the thesis research fit into the whole is often helpful and required by the thesis advisor and committee. Finally, discussion, conclusions and recommendations for further research and/or programmatic initiatives should be included either in each paper, or as a separate chapter.

As with most public health research, most thesis research will be a collaborative effort of the student and other members of an investigative team. However, the thesis itself must be authored by the student in its entirety. Therefore, manuscripts arising from the thesis are typically first authored by the student. Papers included in the thesis must be first authored by the student.

It should be noted that an overall thesis abstract is required as part of the thesis for both the traditional and papers options.

The student’s Departmental Thesis Committee (DTC) will appraise the adequacy of the research proposal and the appropriateness of the option selected for presenting the results. They will also advise the student on the appropriate “chaptering” of the document for their particular case. The student must obtain written approval on both counts from the DTC.
Thesis and Final Oral Defense

The thesis topic acceptable to the DTC must be a piece of original, independent research focusing on selected aspects of international health in developing or underserved societies.

The Final Oral Defense consists of two parts, a public seminar and a defense of the thesis before a Committee of Readers. The public seminar and closed thesis defense are typically held on the same day with the seminar being conducted first, followed immediately by the closed defense. Thesis readers should have at least one month to read and suggest revisions of the thesis prior to the Final Oral defense. The Committee of Readers must accept the thesis as satisfactory and, in addition, the Committee Chair and the Thesis Advisor must write a letter of acceptance to the Associate Dean for Academic Affairs.

The Committee of Readers: An associate dean responsible for student academic affairs shall, upon recommendation of the student’s Department Chair, approve a committee of four readers, including the student’s thesis advisor, who serves as a departmental reader. The readers should be at the rank of Assistant Professor or higher. A minimum of three departments of the University, two being from the School of Public Health, must be represented. Two readers must be from the student’s Department; however, with the approval of the Committee on Academic Standards, the Department may nominate an individual from outside the Department to replace a departmental reader. At least one reader must have neither a primary nor joint appointment in the student’s Department.

Any student returning from a leave of absence must be registered for a minimum of two quarters before thesis defense can be scheduled.

Annual Review

All students are required to maintain regular and sustained progress towards completion of their doctoral program. Near the end of each academic year a review of past progress and future expectations will be carried out in five stages.

1. The student must ensure that the Tracking Record of satisfactory completion of course and other requirements maintained by the Academic Coordinator is current and correct.

2. The student will prepare a Student Narrative Progress Report of accomplishments to date and objectives for the upcoming year. The narrative should describe the current state of preparation of the research proposal, conduct of the data collection and analysis, or writing of the thesis, along with specific tangible objectives and plans in these regards for the next academic year.

3. The student and advisor will meet (or exchange correspondence if the student is overseas) to review the Tracking Record and Student Narrative Progress Report.

4. The faculty advisor will summarize the understanding reached with the student in a brief Advisor Report.

5. The Curriculum and Credentials Committee will review the students’ program and supporting documentation. Continued enrollment in the doctoral program is contingent upon a satisfactory review by the Committee.

The Tracking Record, Student Narrative Progress Report and Advisor Report will become part of the official student record maintained by the Academic Coordinator.

Tuition scholarship awards will be made only for a specific academic year subject to renewal based upon evidence of progress as reflected in the annual report of the student and advisor. Provision will be made for awards of up to eight terms, but only if normal progress toward completion of requirements is registered.
STUDENT INFORMATION

Academic Ethics

The faculty and students of the School of Public Health have the joint responsibility for maintaining the academic integrity and guaranteeing the high standard of conduct of this institution.

An ethical code is based upon the support of both faculty and students who must accept the responsibility to live honorably and to take action when necessary to safeguard the academic integrity of this University.

Students enrolled in the School assume an obligation to conduct themselves in a manner appropriate to The Johns Hopkins University's mission as an institution of higher education. A student is obligated to refrain from acts which he or she knows, or under the circumstances has reason to know, impair the academic integrity of the University. Violations of academic integrity include, but are not limited to, cheating, plagiarism; knowingly furnishing false information to any agent of the University for inclusion in the academic records; falsification, forgery, alteration, destruction or misuse of official University documents or seal; violation of the rights and welfare of human subjects in research; violation of the welfare of animal subjects in research, falsification of research results; misconduct as a member of either School or University committees or recognized groups or organizations.

All members of the academic community are responsible for the academic integrity of the university. Students and faculty alike must work together to minimize the possibility of violations of academic integrity.

The faculty is responsible for the conduct of examinations, for announcing the ground rules for all work in a course at the beginning of the term in which the course is offered, and for the security of examination papers and teaching laboratories. Proctoring is at the discretion of the instructor.

A student with knowledge of any violation of academic integrity governed by the School of Public Health constitution has an obligation to report such violation, including the identity of the alleged violator(s) to the appropriate faculty member, one of the deans or to the Academic Ethics Board.

All members of the Johns Hopkins community are responsible for immediately informing the Academic Ethics Board of the School of Public Health of any suspected violations of its Constitution. The Ethics Board, composed of six students and four faculty members, is responsible for implementing its Constitution according to the procedures set forth therein. This includes formal hearings of suspected violations. Students and faculty should become familiar with the Constitution, copies of which can be obtained in the office of one of the deans responsible for student affairs.
To be approved for graduation, the student must have all outstanding charges of misconduct and violations of academic ethics resolved.

• The Code in its entirety can be found in the School-wide Student Handbook under Policy and Procedure Memorandum Students 1

All students in the Department need to read and follow this code. Failure to adhere to the academic ethics code may result in dismissal from program, department and/or school.

Disability Support Services

The Johns Hopkins University does not discriminate on the basis of race, color, gender, religion, sexual orientation, national or ethnic origin, age, disability, marital status, or veteran status in any student program or activity administered by the University or with regard to admissions or employment. The University provides appropriate, necessary, and reasonable accommodation to qualified students, faculty, and staff who are disabled.
In accordance with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 (ADA), the University provides appropriate, necessary, and reasonable accommodation to qualified students who are disabled. When generally accessible facilities do not adequately accommodate a specific disability, the University makes program and/or facility adjustments as are reasonably necessary to assure individual access.

For individual-specific accommodations, individuals are required to provide from an appropriate professional diagnostian a comprehensive evaluation of their specific disability and recommended accommodations based upon their current level of functioning in an academic or employment setting. This documentation regarding students should be forwarded directly to the school's disability coordinator immediately after the school's offer of admission or as soon as student is enrolled. The University reserves the right to request additional information from an individual's health care provider, or a health care provider that it designates, to verify appropriate accommodations.

Costs for personal attendants, personally prescribed devices, and services for personal use or study are the responsibility of the disabled student, faculty, or staff member.

Questions regarding this policy should be referred to Betty Addison, the school's disability services director, who may be reached at 410-955-3034; fax 410-955-0464; email dss@jhsph.edu. The Office for Disability Services at the Bloomberg School of Public Health is located at 2017 East Monument St. Additionally, the University Affirmative Action Office is located on the Homewood Campus: 205 Garland Hall, 410-516-8075.

**IH Student Group**

The Department of International Health has a very active and organized student group. This group was formed to facilitate stronger communication and interaction between the Department (faculty and administrators) and the students, and works each year to plan and develop different opportunities aimed at achieving this goal. Participation by all IH students is welcomed and encouraged. For more information on the activities and functions of this group and to learn more about getting involved, please contact Cristina Salazar, the Academic Programs Administrator.

**Student Space**

Each program area within the Department has a limited number of offices allocated for student use. The program areas can assign these to students at their discretion. Please contact the faculty coordinator for your specific program area to inquire about the availability of space and how it is allocated to determine if you are eligible.

In addition, the Department maintains a student office on the 8th floor, room E8038. This room is available for use by all currently enrolled International Health students. The room is card accessible by way of your JHU ID badge. The room is equipped with several computers, a printer, a scanner, a microwave, a refrigerator, and desk space. We encourage students to utilize this space as needed. Please help us in making it enjoyable for everyone by keeping it tidy and clean.

**Course Waivers**

Waivers of requirements may be granted for units earned in equivalent courses taken in this or another school. The waiver request must be based on coursework already taken which is similar in content, and documentation (i.e., a transcript and course syllabus) must be provided. In addition, the waiver request must be submitted at least one month prior to the beginning of the quarter in which the course is offered. Requests for waivers for any course offered in the first quarter must be submitted no later than the end of the first day of classes. No requests for first quarter waivers will be considered after this time. In no case can more than half of the required program-specific units be waived.
WAIVER PROCESS: Waiver requests should be addressed to the relevant Program Coordinator (Dr. Robinson for Health Systems, Dr. Moulton for GDEC, Dr. Winch for SBI and Dr. Christian for Human Nutrition) of the student’s program area at least one month prior to the beginning of the term in which the course takes place in order to give the Committee ample time to consider the request. Requests should include a short letter of explanation, which includes the name of the course the student is requesting to waive out of, as well as the name, description, course syllabus, and transcript showing the grade earned in the course which is being substituted. Once the Program Coordinator has approved the request he/she will forward the email to the Chair of the Curriculum and Credentials Committee (Dr. Joanne Katz) and copy Cristina Salazar.

Once a waiver request is approved, a record of its approval will be noted in the students file on the student’s tracking form. Please note that approval of a waiver request does not reduce the number of units a student is required to earn in their degree program.

Guidelines for Student Employment

All the procedures and forms are posted online https://my.jhsph.edu/sites/IH/student/default.aspx

Hours of Work and Overtime
Full-time students who work for Johns Hopkins Bloomberg School of Public Health may work a maximum of 19 hours per week during periods of enrollment.

During periods of non-enrollment, (i.e., summer, spring break, etc.), student employees may work up to 40 hours per week. Students that wish to work over 40 hours per week are required to have it approved by the IH payroll prior to the work.

For FICA TAX purposes, "summer" begins on June 1st. At that time, students may work up to 40 hours per week.

Direct Deposit
Student employees on payroll may elect direct deposit to any financial institution in the continental United States participating in the Automated Clearing House. Deposit takes a minimum of three pay periods to begin and must be for the full amount of net pay. Direct deposit forms can be downloaded from http://www.controller.jhu.edu/uforms/c100.pdf or secured from the Department of International Health’s Human Resources & Payroll Office (Wolfe Street Bldg. E8521).

Work-Study
Students employed under the Federal Work-Study (FWS) program during the 2013-14 academic year may also be employed as Teaching Assistants during the same period of FWS employment only with prior approval by the Department of International Health and by the FWS employment office. The Teaching Assistant employment status is the exception to the restricted crossover status related to FWS employment. Those students in FWS seeking to work as a TA must request approval from Amy Jones (Associate Director) in Financial Aid.

For additional information or specific inquiries, please contact Tomeka Chance (443- 287-8796; tchance@jhsph.edu) or Tanya Falls (410-614-6259; tfalls@jhsph.edu) in the Department of International Health’s Human Resources & Payroll Office.

Teaching Assistantships
The Department of International Health relies on the assistance of students to provide support for the teaching efforts of various courses throughout the year. All TA’s should go to the website https://sites.google.com/site/ctltteachingtoolkit/teaching-assistants and take the TA training course, that is designed to guide students in their roles and responsibilities as TA’s.
TA Responsibilities

Teaching Assistants can be requested to perform a variety of different activities for the course that they are supporting. All TA functions and hours must be determined prior to beginning any effort on behalf of the course by both the TA and the faculty instructor and will be documented in the TA Agreement (see below). Some possible functions of the TA are as follows:

a. Grading written assignments and exams
b. Working with and advising discussion groups on projects and other assignments
c. Facilitating discussion group sessions
d. Taking attendance
e. Coordinating the distribution and collection of course materials
f. Organizing/managing the course on CoursePlus
g. Various other duties as requested

Student Eligibility & Payment Procedures

All students must meet the following eligibility requirements to be hired as a TA:

• TAs must be current students enrolled in a degree program at JHSPH. Students who have completed their course requirements but have not yet graduated are still eligible to be TAs until such time as the School has conferred their degree.
• The individual must have successfully completed the course, which they are supporting at JHSPH (or a similar course at another institution) prior to the term in which they will act as the TA.
• Student TA must be enrolled as a full-time student during the term student is working
• All paperwork must be submitted to the Academic Programs Administrator by the 1st day of the course student is assisting.
• A student can be a TA in the summer only if he/she is a continuing student.

Leave of Absence

A Leave of Absence is an officially recognized inactive student status. This is an option available to students who are forced to take a temporary break from their program of study due to reasons beyond their control. There are specific criteria for determining if you are eligible for a LOA and it may have an impact on international student visa status, financial aid, and student employment. International students who are on LOA and are out of the United States for more than three months will have their I-20/DS2019 cancelled, and will have to request a new visa in order to come to the US again. It is important to review the LOA policy for information on the process to request a Leave of Absence.

Students requesting a LOA cannot be employed in a position where their work is related to their thesis.

Any requests for a change in status must be made in writing to the Department through the Academic Program Manager (Cristina Salazar). Once a written request for a change in status (i.e., leave of absence) is received, the student will be given a requisite form, which must then be signed by the student’s advisor and other applicable persons, and must be approved by the Curriculum and Credentials (C&C) Committee. The C&C committee will review it and may ask for more information about the request. If approved, the Academic Program Manager will submit the Leave of Absence Requisite form to the Registrar’s Office for final approval. When approved, students will pay $50 per term for each term on leave.

Parental Leave of Absence

Graduate students and postdoctoral fellows at the Johns Hopkins Bloomberg School of Public Health may request parental leave following the adoption or birth of a child. Parental leave applies to either parent. If both parents are graduate students and/or postdoctoral fellows in the School, both may request simultaneous parental leave.
This policy covers wages to graduate students and postdoctoral fellows who at the time of request for the leave are receiving stipend support from a training grant, departmental funds, Sommer Scholarship or other School scholarship. The policy also applies to wages for work that is directly related to their dissertation/thesis; postdoctoral fellows receiving either stipends or wages for work that is directly related to their research training are also covered by this policy. Wages for other types of employment or federal work-study are not covered under this policy. Students and fellows who receive such wages may take unsupported leave.

**Provisions**

Parental leave shall include sixty calendar days of stipend/salary support* and health insurance coverage. Stipend and health insurance support during parental leave will not be granted to those individuals who do not have such support provided to them at the time of the request for leave. Graduate students and postdoctoral fellows who receive loans must comply with his/her loan payback requirements.

Any leave requested longer than one term or sixty calendar days must be approved by the graduate student’s or postdoctoral fellow’s department, but shall be considered unsupported leave**. Insurance premiums during unsupported leave will be the responsibility of the graduate student or postdoctoral fellow. However, the department, at its discretion, may continue to support the student or fellow, including providing for insurance premiums, if other funds are available.

The leave begins on the day the graduate student or postdoctoral fellow is no longer fully engaged in their professional and academic activities and, to the extent possible, should be requested in advance of a birth or adoption. Retroactive requests will be considered on a case-by-case basis.

**Procedures**

1. A graduate student or postdoctoral fellow should notify the department at the earliest date possible of the intent to utilize the parental leave policy. The department is responsible for updating the payroll and tuition payment systems.

2. If the leave begins mid-term, the graduate student or postdoctoral fellow shall receive the grade of “Incomplete” for all courses and academic credits taken during the then current term; the graduate student or postdoctoral fellow will then be on leave of absence for the following term and is expected to officially change her/his registration status to “Leave of Absence.” The graduate student or postdoctoral fellow is responsible for making arrangements with each instructor to resolve a grade of incomplete; an incomplete grade, if unresolved, will become “F” after 120 days unless an extension of this time has been approved by the instructor and the registrar notified.

3. Any leave of absence exceeding 60 days shall be considered personal leave. In any event, only 60 calendar days of stipend/wages will be provided, whether the leave crosses two terms or covers only one term.

* This policy is based on the NIH Grants Policy Statement “Subpart B: Terms and Conditions for Specific Types of Grants, Grantees and Activities” pertaining to the parental leave policy for National Research Service Awards (NRSA) awardees.

** Students and Postdoctoral Fellows supported on NIH Training Grants must adhere to the NIH Policy on Unpaid leave, which states, “Individuals requiring extended periods of time away from their research training experience, that is, more than 15 calendar days of sick leave or more than 60 calendar days of parental leave, must seek approval for an unpaid leave of absence. Approval for a leave of absence must be requested in advance from the NIH awarding office. Fellows must provide a letter of support from the sponsor, countersigned by an AOO, and must advise the NIH awarding office of the dates of the leave of absence. Upon approval of the request, the NIH awarding office will issue a revised NRFA extending the ending date of the current budget period by the appropriate number of days or months of unpaid leave time. Recipients are precluded from spending award funds during the leave of absence.”

---

**Academic Advising**

PhD degree programs in the Department of International Health are a mixture of didactic coursework, independent reading, research/practice experience and the preparation of a culminating document. As the
program progresses, there are many decisions to be made regarding which courses and experience will address a student’s educational objectives. To assist with navigating this process, each student is assigned an academic faculty advisor who has the responsibility of serving as a guide and mentor. It is the Department’s view that graduate degree programs must be owned by the student with the faculty acting as guides in the student’s own development as a scholar and practitioner. This section is intended to guide the student and the faculty member in making the advisor-advisee relationship as successful as possible.

This section has three goals:
- describe the Department’s advising philosophy;
- provide answers to frequently asked questions;
- provide guidance on how the student and advisor can interact effectively.

The suggestions in this section are derived from the experience of faculty who have worked with students for many years and from students who themselves have been guided by these faculty members. The document is dynamic and needs input from students and advisors as they use it. Please submit comments and concerns to the Academic Coordinator.

**Advising Philosophy, Department of International Health**

The primary purpose of the academic advising process is to assist students in the development and implementation of a meaningful and appropriate plan for their graduate education and future career. This purpose is driven by a set of core values:

1. Advisors are responsible to the students they advise.
   - Advising is an integral part of the educational process with both students and advisors benefiting from the relationship.
   - Regular student-advisor communication allows advisors to maximize the student’s ability to develop life-long learning skills and for the advisor to act as an advocate for the student.
   - Advisors must recognize the diversity of student backgrounds and the opportunities provided by this diversity for maximizing educational achievement.
   - Advisors are responsible for connecting students with others in the academic community who can, when appropriate, assist in the advising process.

2. Advisors are responsible to the institution.
   - As faculty, advisors are responsible for maintaining the academic standards and reputation of the Department, School, and University. This implies a focus on academic excellence for the students they advise.
   - Advisors must comply with the policies and procedures established by the Department, School and University for the didactic, exploratory, and research portions of a graduate student’s educational experience.

3. Advisors are responsible to the community of higher education.
   - Advisors must uphold the values of academic and intellectual freedom that characterize the university environment in the United States.
   - As faculty, advisors are responsible for the training of the next generation of academic leaders in education, research, practice, and service.

4. Advisors are responsible to the public health community.
   - As faculty in a School of Public Health, advisors are committed to improving the health and well being of populations everywhere in the world through education, research, practice and service.

**The Advisor-Advisee Relationship**

Please refer to the Advisor/Advisee Meeting Guidelines on page 22

All students in the Department are assigned a faculty advisor who is a full-time member of the advising faculty in their program area. In addition, the PhD Academic Coordinator for their program also serves as a general advisor to students. The advisor has the responsibility of assisting the student in designing an
academic program that meets the student’s goals within the requirements of the University, School and Department. Additionally, the advisor serves to direct the student to appropriate resources and research opportunities. The advisor should be the first point of contact in resolving academic problems. Advising students is an integral part of every faculty member’s responsibilities. Thus, the student should not feel that he/she is imposing by asking for advice. Faculty members expect to be available to students, although the students should be respectful of the faculty’s time by scheduling and respecting appointments. This is especially true in our department where research and practice responsibilities of the faculty require them to travel a significant portion of their time. **The responsibility for arranging meetings with their advisor lies with the student. Students should not expect advisors to seek them out for required appointments.** The student bears the responsibility of consulting the advisor when necessary and arranging periodic appointments, even if there are no specific problems. In general, advisors and advisees should communicate at least once per term, preferably more often. All course registrations must be approved by the advisor. The student is required to schedule a meeting in order to assure that the advisor has reviewed the student’s schedule and to plan any special studies projects or thesis research as needed with the advisor before the registration period deadline. If due to travel or scheduling difficulties, such communication cannot be conducted before the registration period deadline, students should receive approval for course registration from their PhD Program Coordinator.

**Responsibilities: Advisor**
- To assist in determining the advisee’s educational goals and needs at the start of the program.
- To serve as an educational and/or professional mentor for the student.
- To maintain awareness of and sensitivity to the level of compatibility between the student advisee and him/herself in terms of academic, professional, and personal interests.
- To facilitate a change of advisor if deemed appropriate to the student.
- To monitor the advisee’s overall academic program and be sensitive to signs of academic difficulty.
- To be sensitive to cultural, medical, legal, housing, visa, language, financial, or other personal problems experienced by the advisee and to be understanding and supportive. The Department has a sizable portion of foreign students coming from diverse pre-professional and professional educational backgrounds. As such, they have diverse needs and experience in managing a US-based graduate education program.
- To meet regularly with the student (at least once a term is recommended) and to identify a mechanism for advising while traveling either through email or by identifying a back-up advisor for periods of extended travel.

**Responsibilities: Advisee**
- To arrange to meet with the advisor at least once each term.
- To comply with registration and administrative deadlines.
- To identify and develop professional career goals and interests.
- To understand administrative policies and procedures and be familiar with the requirements for their program as described in the *Academic Guide*.
- To maintain the academic checklist and review it at meetings with the advisor.
- To complete an Advisor Evaluation Form twice during the academic year, once at the end of 2nd term and again at the end of 4th term.

**Change of Advisor**
For a variety of reasons, most often related to participation in faculty research for thesis work, a student or a faculty member may wish to have the student change advisors. Faculty wishing to initiate a change should discuss this with the Chair of the Curriculum and Credentials Committee. Faculty will need to submit a report of the student’s progress at the time of this request. Student-initiated changes of advisor are made without penalty and are a common occurrence. Students should write a letter of request to the Chair of the Curriculum and Credentials Committee to change from one faculty member to another. Both faculty members must agree.

**Students may expect the following from their Advisors:**
• Advisor’s approval on course registrations, course changes, pass/fail agreements, waiver requests, and on all petitions to the Curriculum and Credentials Committee.
• At least one meeting per term with the advisor.
• Oversight of the student’s overall academic program and sensitivity to any academic difficulties.
• Knowledge of and interest in the student’s career objectives.
• Review of required and recommended courses for the program area. Assistance in designing a plan for the fulfillment of required courses and assistance with planning the course schedule for the year.

Student Feedback on Advisor Performance
The Department Chair reviews all faculty performance on an annual basis. This review assesses the career track of each faculty member as a part of the faculty mentoring role played by the Chair. In order to provide the most accurate information on faculty performance, the Chair needs information on all aspects of the faculties’ roles including student advising. As a part of this process, we have initiated a formal advisor evaluation process that includes input from students. The provision of honest information is required of all students twice per year and these advisor ratings are handled with complete anonymity. At the completion of the 2\textsuperscript{nd} and 4\textsuperscript{th} terms each year, all students will complete an Academic Advisor Evaluation Form and submit it to the departmental Academic Program Administrator (Cristina Salazar).

PhD Advisor/Advisee Meeting Guidelines

The guidelines below are the absolute minimum interactions students and advisors should expect. Many of our students and faculty meet much more frequently and often become life-long colleagues as a result of the mentoring experience.

<table>
<thead>

Information for Students Traveling Abroad

Most important steps for all students:
1. Fill out the International Travel Checklist
2. Fill out the Travel to Countries with Travel Warnings Form (if necessary)
3. Register travel on the International Travel Registry at https://travelregistry.johnshopkins.edu/Travel

As you prepare to take an overseas assignment you should take into account a few administrative, health, and safety issues before you leave the country. Keep in mind that when working overseas, even in the short-term, you need to be prepared before leaving the US in order to have a productive experience and avoid unnecessary health and safety risks. The Department of International Health has developed the attached checklist for you to complete prior to leaving the country to assist you in preparing for your assignment. It is the responsibility of each student to complete and submit the completed checklist no later than THREE WEEKS prior to your departure for all overseas assignments. Students traveling to countries with Travel Warnings issued by the U.S. State Department must follow the procedure described in section B. Safety (2). Copies of the checklist may be obtained from the Departmental Academic Coordinator, from the MSPH, PhD or DrPH Academic Guides, or online at http://tinyurl.com/IHTravelForms. Here are instructions for you when traveling overseas:

A. Administrative:
(1) UNIVERSITY APPROVALS – Be sure that you have the requisite approvals from the University to initiate any overseas research. These include submission of the attached checklist, approval from your thesis committee for dissertation research (must be signed before collecting data) or approval from your advisor and Program Coordinator for the MSPH internship, and approval from the IRB for collecting data for research projects. Remember that for student research your advisor is the Principal Investigator, and she/he must approve the research and sign the forms. The IRB committee meets monthly, and it can take several months to get all of the IRB approvals finalized, so plan ahead accordingly. You may also need to have approval from the NIH to conduct your research overseas. The Office of Protection of Research Risks (OPRR) is the agency that grants such approvals. There is a special form that must be signed by dissertation committees for approval of thesis research. Post-hoc submission of these forms is not acceptable, and you run the risk of your research being deemed invalid, so you should take these precautions seriously. Conducting research on human subjects without IRB approval is a serious breach of ethical conduct.

(2) DEPARTMENTAL APPROVALS – All students must submit the International Health Travel Checklist prior to traveling. If a student is traveling to a country with a Travel Warning he/she must submit the Traveling to Countries with Travel Warning form at least three weeks prior to departure, to get approval from the Steering Committee (for more information see section B.2). Student must also include an evacuation plan if are traveling with an outside organization or with faculty. Students cannot travel without this approval. All forms can be found here http://tinyurl.com/IHTravelForms and must be submitted to the Academic Programs Manager Cristina Salazar.

(3) REGISTERING TRAVEL – Once your travel plans are finalized and the plane tickets are purchased, the University requires that you register all your travel details online here https://travelregistry.johnshopkins.edu/Travel. Please make sure you add the emergency contact information and fill out the dates of your itinerary. If your itinerary changes throughout your trip, make sure you update your information online.

(4) TRAVEL DOCUMENTATION – You should assure that your travel documents are current and appropriate. Visas, if necessary, should be obtained well in advance of your travel. You can find out if a visa is required for the country you will be visiting by calling the embassy of that country (most are in Washington), or by checking the web sites of most embassies. If you have a problem with getting a visa you will often fare better if you then
go yourself to the embassy to have the visa processed. This is especially true if you hold a non-US passport. Remember also that you may need a visa for transit through some countries. Also, a tourist visa is often all you will need, but a business visa may give you extra time in-country and help you avoid additional fees if multiple visits are required. Your advisor can help you obtain a letter to submit with your visa application if that is required. You should also be sure that your passport will be valid for the full time that you will be away. Most countries require that your passport be valid for 6 months from the date of departure. Finally, be sure that you have return airline tickets well in advance of your trip. Do not travel with a one-way ticket, as you may be restricted from entering the country upon arrival, and you may have difficulty securing airline tickets while away.

(5) HOST COUNTRY APPROVALS – Be sure that you have the necessary approvals from the host country to travel and conduct research. Many host country governments have agencies that must approve all foreign research projects. To check on this you should consult with your advisor, as well as with your host country collaborators. These approvals often take considerable time, so be sure to plan ahead. You should also be sure that the host-country collaborating agency has granted you approval. It is good to get this in writing. Be sure that they know the scope of your work in-country, your travel dates, where you will stay while there, and who they can contact if a problem develops. Take care to set your travel dates to accommodate your collaborators. If you are not sensitive to their schedules you run the risk of getting a low level of support while you are on travel status.

B. Safety
(1) CRIME – Crime is a serious problem for persons traveling. It is recommended that you not carry or display large amounts of cash when traveling. Use a money belt to store your money and valuables. Store valuables (including your airline tickets, credit cards, money, passport, and travelers checks) in the hotel safe, or other secure location if a safe is not available. Check with your local collaborators about risky situations and areas to avoid. If you are robbed do not resist – give them your money and valuables. It is always better to replace them then risk physical harm. Report such events to the police immediately. You should also make a photocopy of your passport and store it separate from your passport. This can be very helpful if you lose your passport. If you need to keep identification on you, use the photocopy of the passport with your driver’s license. It is also helpful to make photocopies of your credit cards, passport, and travelers check receipts and leave them with someone you can contact back home. This will facilitate replacement if they are lost or stolen.

(2) TERRORISM AND CIVIL CONFLICT – Check before you leave the country with the State Department (http://travel.state.gov/travel/cis_pa_tw/tw/tw_1764.html) to see about safety in the country you are traveling to. If you are traveling for a school related activity (including a practicum requirement with an organization or a faculty member, or for your doctoral thesis research), to a country that has a Travel Warning from the US State Department, you must follow the following procedure:

1. Complete the International Travel Checklist
2. Complete the Countries with Travel Warnings Checklist
3. Obtain an evacuation plan or a safety plan from the organization or faculty member you will be working for in said country.
4. Make a photocopy of your passport, health insurance card, and student ID card

Submit all the paperwork to Cristina Salazar (E8518) at least THREE WEEKS in advance. This material will be reviewed by the Steering Committee and will have to be approved by the International Health Department Chair, Dr. David Peters, before you commence travel.

Register with the US embassy and/or your home embassy if you are a 3rd country national (if working on a US sponsored project 3rd country nationals should register with the US embassy) when you arrive. If you have any problems you should contact the embassy. This includes for problems with health, safety, or civil conflict. You should also contact your advisor and family if you have any problems. Use common sense in your dealings, and avoid association with persons who may place you at risk, or cause you to be a target for terrorism or police harassment.
(3) CONTACT INFORMATION – It is important that you leave your contact information with your family and your advisor. Also, be sure to leave your family’s contact information with your advisor, and vice versa. If you are out of town while away be sure to let your advisor and family know. It is quite common for students to leave town for trips and people at home are unable to reach them, generating significant worry and concern among your family and colleagues. You should also leave behind the name and contact information of your colleagues you are working with, and let them know how to contact you when you are in-country in the event of an emergency.

C. Health
(1) VACCINATIONS – Be sure that you have obtained relevant vaccinations prior to travel. To ascertain which vaccinations you need you should consult with a travel medicine specialist. There is a travel medicine clinic on campus, and many HMO (such as Kaiser) have travel medicine offices. You can also consult the CDC website for recommendations of appropriate vaccines. Many vaccinations these require a series of injections or oral medications, so plan ahead to assure that you are properly vaccinated. When traveling to areas with malaria you should secure a prescription for malaria prophylaxis medications. One of the most serious health risks you face is from malaria, and it can be lethal. Take such medications as recommended, and take the full course – which usually requires that you take them for a full four weeks upon your return. If you get a high fever, severe headache, or flu-like symptoms upon return from a malaria zone be sure to go to the doctor immediately, as this can be a sign of malaria. Prompt treatment is imperative to avoid serious health consequences. Other vaccinations that are often needed include tetanus, measles, polio, rabies, Hepatitis A, Hepatitis B (especially if you are sexually active or work with biologic samples or blood), Japanese Encephalitis, and yellow fever. Note that entry into some countries requires a yellow fever vaccination, which must be recorded on a yellow form provided by the WHO. There are only certain places you can obtain these, so plan ahead. In some countries in Africa if you arrive without the yellow fever vaccination card you will be vaccinated upon entry, which carries some risk of contamination with unsterile equipment. Consult with a travel medicine specialist well before departing. The student health plan offered by the School does not cover the cost of these immunizations.

(2) INFECTIOUS DISEASES – Take care with what you eat and drink to avoid food-borne contamination. It is advisable that you consult the CDC website to get advice on how to avoid food and drink borne infections. You may also want to carry a supply of an antibiotic (such as ciprofloxacin), which your travel doctor can give you before you go. Be sure to get instructions on when to take these, as well as how to take them. You should also be very careful with the water and drinks that you consume. It is advisable to drink bottled water in which you see the sealed bottle. Be careful of fruit juices which are often contaminated or which have had water added to them. Note also that table condiments, such as chili sauce, are also often a source of contamination. It is also very important that you take extreme care to avoid a sexually transmitted infection, including HIV. If you will be sexually active you should use a condom for all sexual contact, oral, vaginal, or anal. You may want to carry condoms with you as a source of condoms may be difficult to find. Take care that the condoms are stored correctly (not in heat) and that they are not expired. The best way to avoid a sexually transmitted disease is to avoid sexual contact.

(3) ACCIDENTS – This is probably the most likely health risk that you face, especially traffic accidents. Avoid traveling by car at night, especially on long-distance highways. When you travel by car use a seatbelt (even if others do not), and tell the driver to slow down if you feel unsafe. It is always much better to risk social embarrassment to avoid an accident, so do not be shy about asserting your desire to have a driver go more slowly. You may want to establish a maximum driving speed before you depart. You should also tell the driver to avoid passing (overtaking) if you feel that he/she is being unsafe. It is also advisable to carry a first aid kit. If an accident does occur seek medical care quickly. If you wait too long you risk serious health consequences. It is suggested that you get and read “When there is no doctor” before you travel. This is an excellent resource on travel health issues for developing countries. It is especially important that you avoid unsterile needles and syringes. In many cases you can request to purchase a new needle or syringe, or have someone with you do so. Note also that the US embassy maintains a list of medical providers in most countries. If you need medical care you may want to contact the embassy. You should also get word back to your advisor and family if an accident occurs.
(4) INSURANCE – You should check to be sure that your health insurance will cover you when you are overseas. You should also consider getting evacuation insurance (such as International SOS which has an inexpensive student policy). This type of insurance will assist you in seeking quality medical care, and in evacuating you should a serious problem arise.

(5) DENTAL – If you will be overseas for an extended time be sure to have a dental check up prior to leaving. You should avoid dental care in many developing countries.

(6) MEDICATIONS – Be sure to carry an adequate supply of required medicines with you. You may not be able to get them while traveling.

Final Note
Please take these common sense precautions seriously. With a little care and planning you can have a safe and enjoyable experience overseas. Realize that each country is unique and has special issues that should be attended to. Your advisor, and others who have traveled regularly to the country you are visiting, can help you plan for your trip accordingly. Note also that this list of recommendations is cursory and will not cover all events that may occur. Plan ahead, be careful, follow the advice of colleagues, and do not be shy about advocating for your health and safety.

Requirements for Admission

Applicants to the program must have a degree in medicine, veterinary medicine, or dentistry; or a master's level degree or equivalent graduate training in epidemiology, statistics, international health, tropical medicine, microbiology, parasitology, immunology, or virology. Prior work experience is preferable.

Educational Objectives*

Overall Program Goal

This program provides training for public health researchers who will use epidemiologic, immunologic and/or laboratory and statistical methods to design, implement, and/or evaluate disease control interventions for diseases of public health importance to under-served populations. Graduates will have a fundamental understanding of the pathogenesis, epidemiology, and control measures applicable to diseases of public health importance in disadvantaged populations throughout the world. Interventions to be studied will be primarily biomedical (e.g. therapeutic or prophylactic drugs, vaccines or environmental modifications), although there may be a behavioral component to effective implementation of such interventions.

Special strengths of the program are infectious disease epidemiology and vaccinology. Students can acquire a broad understanding of the methods needed to design studies and gain hands-on experience in the design, conduct and analysis of community and clinical trials and/or laboratory based investigations, including the immunologic and biologic basis of responses to immunizations and other prophylactic or therapeutic interventions.

General Knowledge

Learning Objectives

- Describe the evolution of key approaches that have been applied in an attempt to address the major public health problems of underserved populations and to place these approaches in the context of general development, culture and health policies.

- Define the most important indicators of health status of underserved populations, identify databases and other sources of information for these indicators, and describe how changes in these indicators reflect changes in the health status of populations.

- Describe the epidemiology, biology, pathophysiology, modes of transmission, and strategies for prevention and control of the major infectious diseases of public health importance to resource-poor environments. Be able to argue for the appropriateness of specific strategies for prevention and control in selected circumstances.

Research Skills

Learning Objectives

- Review and critique the relevant literature on a topic of interest.
- Place a research question in the context of current knowledge.
- Frame a research question in terms of study goals and specific aims.
- Design a research study to address specific aims. Be able to differentiate between study designs and to argue in favor of using a specified design as most appropriate to address that research question.
- Develop and write a research proposal.
• Develop and justify a budget for a research proposal.
• Discuss the ethical issues involved in research in resource poor environments and argue for a particular approach to addressing these ethical issues.
• Prepare an application to an IRB for ethical approval.
• Implement and manage a research study, monitor the progress of the study and the quality of data collected.
• Produce an appropriate statistical analysis of the data collected during the research project, and provide a reasoned interpretation of these results.
• Place the research findings in the context of current knowledge, identify limitations of the research, and be able to specify further areas for research.
• Analyze the policy implications and public health significance of the research findings.

Communications

Learning Objectives
• Make oral and poster presentations of research findings for professional audiences.
• Write manuscripts of publishable quality for the peer reviewed literature that describe and explain research findings.
• Teach other students basic introductory materials in the student’s general area of expertise.

<sup>4</sup> This course is also offered online 4<sup>th</sup> term

The foregoing requirements represent the minimum common core courses for GDEC students. Depending on a student’s background and interests, it may be advisable to attain further expertise in an area. For example, many students obtain a concurrent MHS in Biostatistics.

Students are encouraged to take advantage of offerings in other schools of the University. The Institute of the History of Medicine in the School of Medicine is a unique resource; the courses most relevant to GDEC students are: History of International Health and Development, and History of Health and Development in Africa (http://www.hopkinsmedicine.org/histmed/courses/coursedesc.html)

*For Program Competencies see page 44*
Requirements for Admission

Applicants must have a prior degree in biological or health sciences, or alternatively in management or social sciences. Prior international or health systems experience is a significant advantage.

Educational Objectives*

The overall goal of the Doctor of Philosophy (PhD) degree in the Health Systems Program is to produce the next generation of leaders in health systems research and practice, particularly in low- and middle-income country settings. Graduates of the PhD program in Health Systems should have the competencies to play leadership roles in: (a) health policy; (b) health planning, financing, and management; (c) monitoring and evaluation; (d) institution building and community development; (e) public health teaching; and (f) research on health systems; in low and middle-income countries or with disadvantaged populations in any part of the world.

*For Program Competencies see page 48

Health Systems Course Requirements

All required courses must be taken for a letter grade with the exception of courses only offered for pass/fail. Any application to waive courses must be made in writing (with an approval from the advisor) to the coordinator at least 1 term prior to the start of the course. Even if waivers are granted, students are responsible for course content on comprehensive exams.

HUMAN NUTRITION
Program Coordinator: Parul Christian

Requirements for Admission

The program seeks to attract and train future experts and leaders in public health nutrition across a range of professional interests and backgrounds. Entry into the doctorate in philosophy (PhD) program in Human Nutrition requires, at a minimum, a bachelor’s degree or its equivalent, preferably in nutritional, biological, food health or social sciences, public health practice, food security, economics or health policy with a minimum of one year of post-baccalaureate experience which can take the form of a master’s degree, a dietetic internship, medical training or other relevant work experience.

Educational Objectives*

The doctoral program in Human Nutrition is designed to train professionals to identify, understand and solve, through scientific methods, problems of public health importance in human nutrition. Graduates are expected to assume leadership roles in academia, government, industry and other private sector enterprises. They will be expected to advance knowledge in human nutrition through research, and advocate the application of such knowledge through public health policies and programs.

Overall Program Goal
There are five overarching academic competencies, applicable to each area of study, that students are expected to master during the course of their doctoral program. Students should:

• Understand the biochemical, molecular, epidemiological and behavioral fundamentals of human nutritional science
• Comprehend the complex interrelationships between food-and-nutrition and health-and-disease in diverse populations
• Master quantitative and qualitative analytic skills required to understand, critically evaluate and conduct nutrition research
• Be able to integrate ethical principles and standards in the conduct of human research
• Develop the professional skills necessary to communicate effectively.

Students in the doctoral program in Human Nutrition are expected to gain knowledge and master skills in the following broad content areas of the curriculum, each with sub-areas of specialization:

Nutrition and Health
Sub-areas: Nutrition over the life span, social, cultural and behavioral influences, food and nutrition policy. This content area of the curriculum has core competencies that can be addressed in a flexible manner, and in consultation with a student’s academic advisor.

Learning Objectives: Know and understand:
• Nutritional processes in each stage of life
• Age-, disease- and physiologic state-specific nutrient requirements
• Social, political and cultural contexts influencing nutritional status of individuals and populations
• Pathological processes and how they influence nutritional well-being and vice versa
• Development and application of evidence-based food and nutrition policies

Biochemistry and Metabolism
Sub-areas: Nutrient metabolism
Minimum requirements in the area of metabolism would provide candidates with the biochemical and metabolic fundamentals of nutritional science.

Learning Objectives: Know and understand:
• Biochemical and metabolic pathways of macronutrients and micronutrients
• Relationship between cell structure and metabolism and nutrient functions
• Genetic basis of nutritional interactions and requirements

Research Methodology
Sub-Areas: Biostatistics, Epidemiology, Nutritional Assessment, Nutritional Epidemiology, Research Proposal Development, Qualitative Research Methods

Minimum required competencies in research methodology provide candidates with the quantitative and qualitative knowledge and skills for understanding and conducting research in human nutrition.

Learning Objectives:
• Know and understand concepts and terms
• Compose research questions
• Link nutrition research questions to appropriate study design, methods, analysis, interpretation, and writing
• Be familiar with underlying principles, methods of collection, analysis and interpretation of quantitative and qualitative data
• Demonstrate ability to analyze a nutrition-related (e.g., dietary or nutritional status) data set
• Understand the use of nutrition reference data
• Demonstrate competence in one primary statistical software and data management package
• Understand the principles and use of nutrition-related laboratory techniques, equipment and field assessment methods

Professional Skills
Sub-areas: Grant writing, Teaching and Public Speaking, Ethics, Information technology

The goal of the professional skills core curriculum is to provide the student with exposure to or experiences in important skills necessary to work effectively as a professional at the doctoral level. As shown below, many of the competencies are accomplished through the academic process of the degree rather than through didactic coursework per se.

Requirements

Students are expected to take 6 quarters and at least 96 units of coursework to satisfy the educational requirements, pass a written and an oral comprehensive exam, a final oral defense and to successfully complete a thesis research project.

At least two thirds of course units that are required are associated with the core content areas common to all doctoral students. The exact number of required core course units taken by a student will vary depending on specific choices made by the student in conjunction with their advisor, but will be 61-71 units if required courses are taken as suggested. To complete the remainder of their coursework requirements, students will choose elective courses and special studies. Thus, about 25-35 units will be completed through electives chosen by the student in conjunction with their advisor, depending on their unique career goals and research interests.

The goals of the doctoral program form the basis for the four core content areas of the educational program: Metabolism, Research Methods, Nutrition and Health, and Professional Skills. Students are required to take specific courses in each of these four content areas in order to develop the competencies expected of all
doctoral-level nutrition professionals. Within each content area are various sub-areas that more clearly define the content area and provide the basis for identifying minimum competencies for all doctoral candidates. Agreement about these competencies, in turn, led to the development of the core curriculum requirements.

### Human Nutrition (HN) Course Requirements

All required courses must be taken for a letter grade with the exception of courses only offered for pass/fail.

4 This course is also offered online 4th term

*For Program Competencies see page 52
Requirements for Admission

Entrants into the program must have: professional experience and a degree in the health or social sciences; or at least one year of graduate training in public health.

Educational Objectives*

The program exposes students to applied social science and health education/communication theory and methods for health-related research, implementation, and evaluation. Coursework emphasizes theoretical and methodological approaches within applied medical anthropology and health communication, qualitative and quantitative methods, competency within a specific cultural/geographic area, and principles and methods for community-based intervention research.

Student Tailored Curriculum

In the SBI program doctoral students develop their own unique course curriculum to meet their specific needs. There are some courses that are required to be taken for credit. Otherwise students are to propose a course of study that meets their own intellectual interests and career goals, and which also meets the broad learning objectives described herein. Under each set of learning objectives is a list of courses that meet the requirements for the set, some indicated as recommended courses. Students are also free to propose alternative courses.

Prior to registering for 1st term each academic year each doctoral student should develop a course plan. There is a form enclosed that can be used for this purpose. This should be submitted to the student’s advisor, and the student should meet with his/her advisor to discuss the plan. The SBI faculty will hold a 2-hour meeting on course selection on the first day of registration, then a day-long orientation session for incoming MSPH and PhD students on the day before the first term. During these two sessions, faculty will meet briefly as a group with each student to discuss their course plan and provide verbal feedback and approval before registration. Changes can be proposed during the school year if needed. The student is requested to first discuss and get the approval of their advisor, and then submit a memo to Dr. Winch for approval. Requests for changes to the approved course plan should be submitted to Dr. Winch at least two weeks prior to the registration date for each academic term.

If students have particular interests that cannot be met through course offerings, requirements for topic areas Social and Behavioral Sciences through Nutrition can be met through special studies courses. Such courses, when carefully developed, are an excellent way for doctoral students to gain requisite knowledge and skills, and give students the opportunity to work closely with faculty and pursue specific intellectual interests. These courses need to first be negotiated with sponsoring faculty, and the enclosed Special Studies form should be completed and submitted with the student’s course plan each academic year (or with requests for changes in the course plan). Students may take courses at any of the Schools within the Johns Hopkins University system. A full listing of University courses can be accessed via: http://webapps.jhu.edu/jhuniverse/academics/online_catalogs/.

*For Program Competencies see page 55
SBI CURRICULUM

All required courses must be taken for a letter grade with the exception of courses only offered for pass/fail.

A. General Requirements
This area of requirements is designed to give students broad knowledge of global public health issues and grounding in epidemiology, disease prevention, and statistics.

Introduction to Online Learning (http://distance.jhsph.edu/iol)

Biostatistics, choose one of the following series (a total of 16 units):

140.621 – 4 Statistical Methods in Public Health I-IV 1 – 4 4
140.651 – 4 Methods in Biostatistics I-IV 1 – 4 4

* examples are 340.666, 340.705, and 340.717. If taken to satisfy this requirement, it cannot count as part of the requirement for courses in Research Design and Methods below.

B. SBI Program Core Requirements
These nine courses provide students with a theoretical and methodological base necessary to be a competent and educated social scientist working on global health issues in the social sciences.

For each of the following topic area students may propose any university course (including special studies) that meets the learning objectives associated with each topic area. After most topic areas is a list of pre-approved courses.

D. Research Design and Methods (7 units)
The learning objectives for this area are to: (a) learn the fundamentals of designing research studies, (b) expand the student’s knowledge and facility with a core research methodology, such as social network analysis, or survey research, and (c) gain a working knowledge of how to appropriately evaluate a social or behavioral intervention.

E. Social and Behavioral Sciences (12-16 units)
This area covers a broad range of issues and topics, and is meant to provide a core foundation in the social and behavioral sciences. The learning objectives for this area are to: (a) understand the major social determinants of health, (b) gain an understanding of multi-level influences on health behaviors, including social, policy, familial, dyadic, and environmental forces that affect health behavior, (c) gain broad knowledge of the major theories of behavior change, (d) understand the theoretical basis and components of major types of behavioral health interventions, such as health education and communication, social marketing, and structural and policy-based interventions, (e) gain a comprehensive understanding of the association between health behavior and health outcomes, and (f) understand how community-based behavioral health initiatives are designed and implemented. This list is not comprehensive. Other courses in social and behavioral sciences offered in the School of Public Health, the School of Arts and Sciences or elsewhere in the university could be substituted with permission of the PhD Program Directors.

F. History, Geography, Culture, and Linguistics (6 units)

The main learning objective associated with this topic area is to prepare students for dissertation fieldwork with regard to knowledge of the history, geography, culture, and language specific to the population they plan to study. Given that there is no required set of courses for this topic area, students and their advisors should include in their course plan which of the three options below the student will pursue:

**Option 1** consists of an applied social and behavioral interventions component during or between the 1st and 2nd year of the doctoral program (similar to the MSPH internship program) that provides students with field experience in a particular country or context. As part of this requirement, students prepare a short paper or essay highlighting the history, geography, culture, and language (where relevant) of the practicum area in the context of their work or study there. The field practicum should be no less than 3 weeks and may be fulfilled domestically or abroad.

**Option 2** includes a combination of direct study courses across the University that is relevant to the student’s fieldwork area, including language study. Students who are unable to obtain a field practicum prior to their dissertation fieldwork may benefit from this option. A minimum sum of 6 units is required.

**Option 3** requires enrollment in a special studies course plan (minimum of 6 units) with the student’s advisor. The special studies should integrate a pre-approved reading list and attendance or participation in at least three cultural, ethnographic, historical, or political activities. Examples of such activities include, but are not limited to: review of a related film or documentary, informational meeting with community or health systems representative, seminar attendance, cultural fest attendance/participation, etc. As part of this requirement, students prepare a short paper or essay summarizing their experience and/or findings in the context of their proposed fieldwork or study proposal.

The overall goal in providing these three options is to enable students to fulfill this requirement within the contexts of their dissertation fieldwork, intellectual needs, and/or course availability. For example, enhancing language skills may be appropriate for some students, but not others. Students should also use this area to become familiar with ethnographic, sociological, historical and economic literature in the area – as well become familiar with regional medical systems and literature on ethnomedical beliefs and practices.

G. Public Health Problem Area (6 units)

The learning objective for this topic area is to acquire detailed knowledge of the public health problem area that the student plans to examine in their dissertation research (e.g., HIV/AIDS, violence, micronutrient deficiency, family planning, malaria, breastfeeding promotion, tuberculosis). The student should consider the following aspects of the health issue of interest: (a) epidemiology (b) regional and global variations (c) biologic aspects and medical treatment, (d) social and behavioral interventions addressing the health issue, (e) policy issues relevant to the health issues, and (f) social aspects such as stigma and discrimination associated with the health issues, or its interventions.

H. Nutrition – Suggested Courses for Students with Interest in Nutrition (Not Required)

The learning objective for this area is to gain basic competency in one or more of the following: (a) nutritional anthropology, (b) behavioral aspects of nutrition, (c) nutritional biochemistry, (d) nutritional epidemiology, or (e) a specific topical area in nutrition, such as nutrition and aging, or global health issues in nutrition.

Description of Research:

Advisor Approval  ______________________________________________

Program Director Approval  _____________ ____________________________
Academic Advisor Evaluation Form

This form is to be completed and turned into the Departmental Academic Coordinator twice per year, at the end of 2\textsuperscript{nd} and 4\textsuperscript{th} terms. Honest evaluations of advisor performance are an integral part of faculty annual performance evaluation by the Department Chair. Under no circumstances will individual student responses to this evaluation be identified to the faculty member.

Circle one

Program Area: DPEC  HN  HS  SBI  DPH  Degree: MSPH  PhD  DPH  Evaluation Term: 2\textsuperscript{nd}  4\textsuperscript{th}

Advisor: ________________________
________________________________________________________

1. Over the past two terms, how satisfied are you with the advice from the following people?

<table>
<thead>
<tr>
<th>Advisor</th>
<th>Faculty Program Coordinator</th>
</tr>
</thead>
<tbody>
<tr>
<td>Very Satisfied</td>
<td>□</td>
</tr>
<tr>
